

## ABSTRACT

Aziiz, Akhlish Diinal. 2014, Design of Malang Abroad Education Center  
Lecturer; Ernaning Setiyowati, MT. and A. Gat Gautama, MT.

**Keywords:** *Focus on Material, Glass Architecture* , Design of Malang Abroad Education Center, Human Sources (HR), Transparent, *Abroad*, Futuristic.

The role of education in society almost on top of the list in an attempt to fix the system foundation that supports other systems. Education has a very influential role as well as the demanding needs of each individual, this is why the privilege in this process will be conducted with the best possible way.

Science as a means by which Allah promised to take the world well, becomes an obligation to do our best as a valuable intention of worshiping in Him, so that every detail will affect the activities in the hope of gaining value despite cooled intention is more rewarding than worship.

Indonesia as a country with a high level of heterogeneity have the potential to develop capabilities that are abroad education to prepare layers of society are more qualified, because the facts can not be denied that the country's education system is still not able to meet the global demand as qualified human resources. Unfortunately, if the educational preparation to school abroad is provided only modest by foreign institutions, this will affect the psychology of the local community to not have a definite direction, and ultimately quality of human resources of the country will be used by foreigners as well.

Glass Architecture as a theme in the Design of Malang Abroad Education Center relations and has a strong background in working comfortably quality education that is expected to direct the user to the results of effective and appropriate.

Glass or glass materials used in the design has a rigid static nature but futuristic, does not rule out the possibility in the use of these materials will result in new innovations to the treatment of materials related to the design of the building material by educational designation. This material would also have a big impact to existing areas with humid tropical climates such as in Malang.

Malang as the city of education has a society which on average have a higher educational levels, there are also many requests for the availability of quality education, such as abroad education, therefore the design of this object is expected to provide community facilities in an effort to studying abroad with systematic access free information as required by the locality of Indonesian society.
