

ABSTRACT

Fauzan. 2014. Design of Integrated Cancer Treatment Center in Malang. Supervisor Dr. Agung sedayu, MT and Aldrin yusuf firmansyah, MT.

Keywords: Clinical Centre, Cancer, Integrated, Integration, BehaviorArchitecture, *Thibbun nabawi*.

Integrated Cancer Medicine Center is a specialized health care facilities to treat cancer in a comprehensive manner, either with conventional treatment methods as well as methods of alternative medicine. The combination of conventional medicine with alternative medicine traditional-modern was the starting point of good communication between doctors and patients, between the type of treatment and between individuals with tradition. The concept of health care as this is a pilot who has not found any similar one in Indonesia, including in East Java. So the existence of these clinics become an inevitable requirement.

However, the development of the type and the type of cancer and the development requires the center to find the disease, the cure and treatment methods. Because each type of cancer can not be treated the same as other types of cancer.

Themed architecture clinics try to encourage healing behavior of patients with physical architectural forms are gradually affecting patients on aspects of psychological, behavioral and His religion. With the concept of the thibbun nabawi expected a change in the religious impact on the health of patients.
