Architectural education increasingly growing , especially in the city of Malang . No wonder so many agencies and academics undertake activities that support the development of knowledge architecture . The number of activities that have been done often produce architectural works along with the latest innovations that need to be well documented . The importance of the existence of a container that can hold events , activities , and documentation of everything about the architecture in Indonesia whether it be storage , maintenance , and learning the works of practitioners and students of Indonesian architecture . An Activity and Documentation Center representative architecture needs to be developed to support these requirements into the appreciative functions , educational , communicative , as well as recreation . The main function of the architecture is the architecture to accommodate the activities and functions of secondary add insight and knowledge about the architecture , both domestic and architectural architecture globally . Application of Deconstruction theme seeks to develop a more communicative object and can demand both for institutions , students and communities . The application of the concept of Program Integration Architecture to Create a communicative explore the many programs available space inside the trans programming methods that produce more communicative architecture , educational , and rekreatif appreciative.
