ABSTRACT

Afandi, Akhmad Bisri. 2012. *College of Informatics Engineering in Blitar.* Advisors: Agung Sedayu, MT. dan Achmad Gat Gautama, MT.

Key words: College of Informatics Engineering in Blitar, Education, High-tech architecture, Javanese architecture transformation.

College of Informatics Engineering is one of education institution which possesses a science discipline, technology, and art related to the computer and computation. There are several factors which influence to the development of this field of science, one of which is the development of informatics/ computer technology. In addition, this college is not only contributing in science technology and art but it is also expected to contribute better knowledge and understanding about the development of technology related to the societies' horizon. Integrate the learning activity, educative and creative is one of activities which encourage the development of technology and art. Knowledge becomes more pivotal for the societies nowadays, high mobility to comprehend and create as well as develop an innovation project. Moreover, good skill and creativity are also required. The informatics technology required society to acknowledge and learn the development of its in every stages. In this globalization era, the development of technology should get along with the finest human resources.

Blitar is one of town in East Java; it possesses better education facilities yet there is still no adequate facility provided for College. Therefore, some people consider that studying in college out of Blitar is more preferable. The development of technology which along with the societies' enthusiasms in acknowledging informatics technology has created huge demand of the society to provide more representative and modern education facilities in Blitar. In order to meet the demand, college of Informatics engineering in Blitar is a best answer.

.	In establishing college building, it should be well-planned and go along with the demand of the modern society as well. In addition, integrate the educative and creative learning and modern facilities are able to support each other so a pretty good combination will be created and able to provide comfort for the user on the move. In planning an attractive college structure are also able to support the display of modern building as well as provide a high-tech impression as a reflection of modern living nowadays.	The establishing of college building which integrate educative and creative learning by providing modern and complete facilities are expected to meet the demand of the society in the development of modern human resources especially in Blitar and East Java nowadays as well as nationally or globally.
