

## ABSTRACT

Siti Aisyah, 11410028, The Relationship Of Self Esteem With The Future Orientation In The XI Students Of Senior High School 3 Malang, *Thesis*, The Faculty Of Psychology, Islamic State University Of Maulana Malik Ibrahim Malang, In 2015.

A lot of young people with an interest in the life, one for the future. To determine the future and in order to attract students, the skills, revenues from which will be a benchmark for success. Meanwhile, a lot of research shows that the benefits of self esteem's future orientation students. It is necessary to form a confident future orientation towards the ability to determine the future and well directed. But there is a lot of confusion was the students to determine not sure of his choice and his abilities.

This Research aims to find out if there is a significant relationship between self esteem with future orientation in high school students of XI class at senior high school 3 Malang. In this study using correlative approach with quantitative (correlation) methods. This research was carried out in senior high school 3 Malang with a total population of 269, and then sample research as much as 140 students with a percentage of 53 % is taken by purposive sampling and processing techniques and data analysis using statistical analysis methods Product Moment.

On the research there were 20 item from the self esteem scale in the scale of adaptation made by tafarodi and swann, and for the future orientation of the scale there are 52 item adaptation of scale created by laurence steinberg. Then both the scale content validity test using Aiken V method and construct validity with Rasch model using values obtained Infit criteria MNSQ  $< +1.30$  to scale self esteem and  $< +1.26$  to scale future orientation. In testing hypotheses obtained a value of  $P = 0.000$  ( $r_{xy} = 0.496$ ). This mean there is a significant and positive relationship between self esteem with a future orientation at senior high school 3 Malang.

The result showed the level of self esteem in nine Class at senior high school students 3 Malang majority are at the level of medium with a percentage of 54.3 %, and then to level the future orientation of the majority of students are in the high category with a percentage of 54.3%. In addition, note that the aspect of selfliking is a major shaper aspects of self-esteem, then the future orientation forming aspect is the main aspect of motivation. Based on a test of a different gendre, obtained the result that the level of self esteem and future orientation on male students is slightly higher than the level of self esteem and the future orientation of the female students
