

Abstract

Azizi, Anas. Of 2012. Final processing (TPA) Supiturang Malang. Lecturer Aulia sikriarini M.T, and Tarranita Kusuma Dewi.M.T.

Final processing (TPA) is a shelter and processing of waste so that it becomes something useful. The presence of TPA in the big cities specially in Malang are less able to cope urban garbage problems because of the lack of adequate systems. TPA in terms of sustainable architecture there should be facilities such as composting, plastic resin production facility, and waste power generation facilities. due to the existence of these facilities have a positive impact on the environment, social, economic and society around. In the design process of final processing, Islam to be a fundamental cornerstone that the blessing concept is taken, so that the elements of designing include blessing of Islam, blessing the environmental, social blessings, and blessings of the economy.

Keywords: Final processing (TPA), Sustainable, Blessing, Islam, Environmental, Social, and Economic.
