

ABSTRACT

Rusady, Feny Annissa. 2012. Science and Technology Center in Long Beach Area Tourism Bengkulu. Lecturers Agus Subaqin, M.T. and Ernaning Setiyowati, M.T.

Keywords: Education, Science and Technology Center, Biomimetic, Long Beach tourist area

Education as one of the areas in improving the quality of human resources (HR) are appropriately received significant attention in social life, in addition to a science that can not be assessed with property, education is the provision for man to live a life. Similarly, the Islamic ennoble seekers of knowledge, especially for useful knowledge. Based on the foregoing, it is a support for education is needed in facilitating the media for people to receive education. Therefore, the Center for Science and technology should be able to shelter and provide maximum educational services for the community, so that people can think and experiment in a science that has been studied as a form of gratitude for the grace of Allah Almighty in the form of a mind that makes human beings as the most perfect among creation. Science as the most essential source of divine, visible from all creation who has knowledge and meaning. So that people used them to inspire the search for solutions for the convenience of man, in this case known as method of Biomimetic (mimicking nature). As mentioned in the Qur'an Surah Adh-Dzariyat verses 20-21, which means "And in the earth are the verses (power of God) for those who believe. And (also) in yourselves. So will you not pay attention? ". This verse also become supporters of Biomimetic method as a method of studying (take) the verses (the power of Allah).

Furthermore, as the Long Beach Area Tourism election tread design is an area that has the highest traffic in the area of Bengkulu, especially around the area there are also schools that cause students, and the general public often traveling or visit the many tourist facilities exist in the area, an opportunity to promote and facilitate access to the objects of Science and Technology Center in the city of Bengkulu. Meanwhile, some tourist facilities in the area are still not had an element of special education. Therefore, the design of the Science and Technology Center in Long Beach Tourism Zone is expected to be one of the appropriate media to support education and increase educational travel options.
