

ABSTRACT

Ketaren, Anindra. 2012 : Designing Orthopedic Hospital in Malang. Supervisor Agus Subaqin, M.T. and Achmad Gat Gautama, M.T

Keywords: Orthopedic Hospital, Analogy Biology, Malang

Humans always want a healthy life. But the man himself always forget the need to be grateful to Allah if given a deliciously healthy. As where the following hadith:

From Ibn Abbas, he said: The Prophet Sallallaahu 'Alaihi Wasallam said: "Two of pleasure, most people cheated on both of them: health and free time." (Narrated by al-Bukhari, no: 5933)

The hospital is the orthopedic surgical hospitals that provide specialized bone health. The hospital provides services according to the standard B-class hospital services, which may include services throughout East Java.

Design method used is: 1) the collection of data related to orthopedic hospitals and theme 2) data analysis 3) synthesis of data 4) design concept.

As for the theme of the design of orthopedic hospital is biological analogy, while the concept is an analogy to be applied to the hand skeleton. The application of the concept of analogy skeleton hand at designing orthopedics hospital is expected to provide a good design for the comfort of patients, visitors and medical personnel.
