Julian, Ricky. 2013: Design of Medical Post-Stroke Rehabilitation Center in Malang. Supervisor: Tarranita Kusumadewi, MT and Luluk Maslucha, ST, M.Sc

Keywords: Medical Post-Stroke Rehabilitation Center, Behavior Architecture, Malang

Health is an invaluable gift of God to human. But a lot of people who realize the importance of health. Health is certainly not out of the pattern of everyday human life itself. Life in urban communities, tend to ignore healthy lifestyles. Habit of eating fast food or instant seems to be a lifestyle for the city. In the long term will certainly lead to the risk of serious disease, such as coronary heart disease, cancer and even stroke. The high increase in stroke survivors in the city of Malang, making the need to improve health facilities that specialized stroke.

Post-stroke rehabilitation medical center is a building that has a function as a health care facility for post-stroke patients. The design of this object has a primary goal of creating a Medical Post-Stroke Rehabilitation Center is able to serve the regional city of Malang and apply the theme Architecture Behavior in design. The concept used is the so-called peaceful space or a space of peace, which is the healing aspect of patient advocates. This concept is implemented in several points of the architecture such as territorial behavior, privacy and the perception.
