

## ABSTRACT

Artika, Vidya Rizkianti. 2013. *Perancangan Pusat Rehabilitasi Tuna Daksa di Surabaya*. Supervising Lecturer: Elok Mutiara, M.T and Yulia Eka Putrie, M.T.

**Key Words:** Pusat Rehabilitasi, Tuna Daksa, and Perilaku

Disability, in bahasa indonesia usually called as tuna daksa, is an abnormality of physical disabilities in disorder motion caused by congenital abnormality a bone structure that is spatially, pain or resulting from an accident, including polio, and paralyzed. The sufferer usually tends to be ashamed, lacks of confidence, and inferiority. It is also affected by the environment, especially since most of the rehabilitation places in Surabaya do not fulfill standard building for disabled people.

For the reason, the rehabilitation building structure which is fulfilling the standard of architectural is needed for disabled people. Not only mention the architecture, the building structure and building design, which are get more attention, hopefully can change the psychology of the sufferer into an individual who is healthier, independent. Confident. And able to socialize.

Therefore, the approach of this study, which is use behavioral theme, focusing on disabled people by the parameter behavior setting, perception, territoriality, and privacy. Apart from the architectural side, this study also takes the approach of Islamic values, which is help human beings, motivates the sufferer to be more positive, becomes well than ever, and establishes the proper relationship among disabled people and their surrounding communities.
