

ABSTRACT

Fatikhah, Yulidatul. 2013. Malang Wedding Center Design. Final Project. Architecture Engineering Department Science and Technology Faculty Islamic State University Maulana Malik Ibrahim Malang.
Adviser: (I) Yulia Eka Putrie, M.T. (II) Elok Mutiara, M.T.

The convention of wedding and wedding reception percentage in Malang has been increased more and more each years. Implicitly, the terms will add impact to the rising of the requirements place to hold the wedding reception. In the meanwhile, the number of the wedding is not compatible with the number of existing wedding building, thus leads to a problem in the availability of wedding building facility, because wedding building demands are much more than the available wedding building. With Muslim society as a major user, they usually didn't get facility suited with Islamic values. In that case, with retrieving behavior in Islamic wedding concept, Malang Wedding Center were designed to fulfill the needs of wedding building, and hopefully will give a balance number for the wedding building demands and its availability. The concept gives boundary in Malang Wedding Center design in relation terms with provided privileges such as salon, boutique, photo studio, catering service, EO, florist, hostelry, mosque and outdoor reception area. Ultimately, there will be obtained Malang Wedding Center design which solve every fields problem regarding with the design object.
