

ABSTRACT

Sultoni, mohammad. 2013. *correlation between adversity quotient with academic procrastination on the kids class 8 in smpn 1 lawang the academic year 2013-2014*. A thesis. The faculty of psychology, the Islamic State University (UIN) Maulana Malik Ibrahim Malang. Tutorship: Drs. H.Yahya,MA
keywords: procrastination academic, adversity quotient.

To achieve a success is not easy, as well pupils and students of class VIII SMP Negeri 1 Lawang which has obstacles in completing their studies. adversity quotient is a measurement of a person's ability in responding to a challenge in life to achieve success. procrastination academic is a behavior that is intentional, it mean that of factor causing delays in the completion of task derived from the decision its self.

This research was conducted on grade VIII in SMP Negeri 1 Lawang with the purpose of: (1) to find out the level of adversity quotient grade VIII in SMP Negeri 1 Lawang (2) to determine the level of academic procrastination students of class VIII in SMP Negeri 1 Lawang (3) to find out whether or not there is a relationship of adversity quotsient wiyh academic procracrastination in students of class VIII in SMP Negeri 1 Lawang.

The design of this research is quantitave correlational. Free variable in this study the adversity quotient (x) and the variable are bound is a academic procrastination. The population in this research is the whole VIII SMPN 1 Lawang school year 2013-2014 (254 student) and taken 20% of population as a sample (50 students). Samples were taken using a purposive sampling technique. Reability and validity of both the measurement tool has ben tested with the method using quotien form CVR Content. While the method of data analysis is using Pearson Product Moment Karl analysis with the help of SPSS 16.0 *for windows*.

The result showed that there was a correlation significant ($r_{xy} = -0,755$; $\text{sig} = 0,000$ & it 0.05) between adversity quotient with procrastination academic. Said to be significant or hada relationship when the count is greater than r tables. with a 5% significance level, count of results correlation r above, it has a value of r hit - 0,755 with probability of 0.000 if p & it 0.05 the H_0 is rejected, and if p & gt 0.05 H_a then accepted. The result of the probability figures shows 0.000 with the sense of probability less than 0.05 H_a H_0 was rejected and then accepted. Does adversity quotient relatiobship (correlated) with the procrastination academic grade VIII the school year 2013-2014 in the SMP 1 Lawang.
