Keyword : Meaningfulness of Life, Altruistik Behavior

Youth in urban nowadays show low sensitivity and their concern for social issues. This could be due to the low sensitivity of the meaning of life has not found by the youth. According to Frankl, the meaningful of life is a strong motivation to bring value and encourage the person to perform useful activities. Useful life is a life that is constantly giving meaning, both to themselves and to others. Meaning is something that is felt important, true, valuable, coveted, give something special to someone special and worthy to be life goals.

The purpose of this research is (1) to find the meaning of life of students of the Faculty of Psychology UIN MALIKI Malang, (2) to find the altruistic behavior of students of the Faculty of Psychology UIN MALIKI Malang, (3) to find the relationship between the meaning of life with altruistic behavior in the Psychology Faculty of UIN MALIKI Malang. The hypothesis proposed was there is relationship between the meaning of life with altruistic behavior in the Psychology Student UIN MALIKI Malang.

The research was done at the Faculty of Psychology UIN MALIKI Malang. The type of the research is a quantitative correlation. Variables consist of the independent variable is the meaning of life, and the dependent variable is the altruistic behavior. The samples in this study using an incidental sampling technique. The sample are students of the Faculty of Psychology UIN MALIKI Malang class of 2008-2011, the number is 79 students from the population. To measure the meaning of life and altruistic behaviors using the scale. For the reliability calculation is used *Cronbach alpha* techniques. And to test correlation statistical analysis used Pearson Product Moment.

After analyzed by examine the correlation statistic *Product Moment Pearson*, it can be concluded that from the 79 students of the Faculty of Psychology UIN MALIKI Malang, the level of student's life shows, 56% of students have a high meaningful of life, 44% have average meaningful of life, and 0% have low level. While the level of altruistic behavior shows there are 47% of students have a high altruistic behavior, 53% of students have average altruistic behavior, and 0% of students have a low altruistic behavior. While relationship between meaning of life and altruistic behavior show a positive correlation, with the acquisition $r_{xy} = 0,718$, the significant level 5% ($0,000 < 0,05$). This proves that the meaningful of life associated with altruistic behavior.
