

ABSTRACT

Kurniawati, Ulfa. 2013. *Relation between Family Social Supporting with the Fold Character Conflict of Female Staff in Islamic State University of Maulana Malik Ibrahim Malang.* **Thesis. Psychology. Maulana Malik Ibrahim State Islamic University, Malang.**

Supervisor: Dr. H. M. Lutfi Mustofa, M.Ag

Key words : Family Social Supports, Fold Conflict

Description of house hold life often is faced with conflicts. Nowadays, the improvement of female emancipation proofs that female could take fold Characters between House wife and workers. Its affects female to have the fold characters conflict, besides if their families or the environments around female careless about them.

The object of this study is the analysis female staff in Islamic State University of Malang. The problems of the study are: (1) to know the social support of female staff in Islamic State University of Malang. (2) To know the rate of female fold characters conflict of the staff. (3) To know the relation between the social support and female fold characters conflict in State Islamic University, Malang.

The data collected by questioners where the scale of family social support and female fold characters conflict to answer the problem, the researcher adopts Linkert Scale. This research uses bivariate correlation test to check the relation between social supports as the predictor and fold characters conflict as the criterion using the correlation data of ProductMoment Pearson. The subjects of this research are 32 female staff (married) of Maulana Malik Ibrahim State Islamic University, Malang.

Based on the analysis, the data stated; in the family social supports aspect, there are two variable 'high and medium' categories. 87,5% (high) and 12,5% (medium). Whereas, the female fold characters conflict is divided in 'medium and low'. 31,5 % (medium) 68,75 % (low) categories. In the hypothesis test, it is got the coefficient correlation result -0,718 with the significances amount 0,000 ($p < 0,05$). From the result it could be analyzed the significances of the relation between family social supports and fold character conflict. However the relation among them are negative, which is mean the highest of the family social supports, the lowest fold characters conflict happen. And the lowest family social support will affect the highest of fold characters conflict happen.
