Keywords: Career Guidance Services, Confidence, Student MA Al Maarif Singosari Malang

Each individual adult is required to be able to show itself in the areas under their control in front of others. Confidence is needed in this regard. Confidence in its future decisions will also be important. Therefore need to be prepared early for careers by starting from the beginning of the majors in high school. Needed career guidance services in schools to assist students in making decisions, selecting, developing and planning a student's career. With the career guidance services it can provide solutions to the problems facing career and can take decisions and choose with confidence.

Career guidance services which we know is one piece of guidance and counseling in schools. Task of career guidance services are the efforts of counselors and subject teachers to assist students in making the right decision regarding his career. Efforts of students to career decision-making is not separated from the existing confidence in the student career counseling service because it is very necessary role in the school. In accordance with the purpose of career guidance services in schools is the role of career guidance in determining the student's career beginning with the selection of majors to advanced career direction to college students.

This study aimed to explore the influence of career guidance services to the students' confidence in choosing majors and careers guidance service level and confidence level of the students in choosing majors. And use quantitative methods correlational research population totaled 290 with a sample of 43 students.

The results obtained are career guidance services in middle category with a percentage of 74.4% and confidence of students in middle category with a percentage of 83.7%. Results on the reliability value of 0,826 career counseling services and the confidence of 0.791. Results of the regression analysis with $F_{hit} = 6.173 > F_{t5\%} = 4.08$. From the findings, a significant difference with a score of $t = 2.814$ and $\text{sig} (p) = 0.007$, where $p = 0.007 < 0.01$. R Square value is 0.131. This means that the influence of career guidance services to self-confidence is 13.1%, while 86.9% is influenced by other factors.

The conclusion that there is a significant influence on career guidance services to the students' confidence in choosing majors in MA Al Maarif Singosari Malang.
