

## ABSTRACT

Rahmayani, Anugrah. 2013. *The Correlation of Intellectual Intelligence and Adversity Quotient in Students of MTs DarulKaromah*. Thesis, Advisor: Dr. Rahmat Aziz, M. Si.

Keywords: Adversity Quotient, Intellectual Intelligence

Adversity quotient is an individual ability to survive in facing variety of problems and difficulties until he can get a way out, solve those problems, and reduce obstacles and barriers by changing his way of thinking and attitudes against those problems. Intellectual intelligence is the ability that includes learning and solving problems, using words, and symbols. Based on these statements, the formulation of this research is: (1) What is the level of adversity quotient in students of MTs Darul Karomah? (2) What is the level of intellectual intelligence in students of MTs Darul Karomah? (3) What is the correlation of intellectual intelligence and adversity quotient in students of MTs Darul Karomah?

This research is aimed to: (1) Identify the level of adversity quotient in students of MTs Darul Karomah, (2) Identify the level of intellectual intelligence in students of MTs Darul Karomah, (3) Identify whether or not there is the correlation of intellectual intelligence and adversity quotient in students of MTs Darul Karomah.

This research is a quantitative research. The sample of this research is 55 grade VIII students of MTs DarulKaromah. The reason is that grade VIII students are more stable at school than grade VIII students and it will not distract and disturb the learning-teaching process more than it will for grade IX students, who are required to study more intensively to prepare for various exams. This research employs one of the simple bivariate correlation analyses, i.e. Product Moment Pearson two tailed.

From the result of simple bivariate correlation analysis ( $r$ ), the correlation of intellectual intelligence and adversity quotient is 0,252. This shows that there is a low correlation between intellectual intelligence and adversity quotient. Furthermore, intellectual intelligence and adversity quotient has significance of 0.063. Hence,  $H_0$  is accepted and  $H_a$  is rejected. The conclusion is that there is no significant correlation between intellectual intelligence and adversity quotient in students of MTs Darul Karomah.
