Keywords : Design, Accounting Information systems, Sales, Inventory, PIECES

---

The purpose of this study is to create a design accounting information system in cooperative student of UIN Maliki Malang. In the design process begins with an analysis of the PIECES and the analysis of system requirements. In this design process begins with an analysis of the PIECES and the analysis of system requirements to find out the required system model of cooperation in carrying out its business operations.

The data used in research is primary and scndary data. The primary data obtained from the interview directly with the cooperative. While secondary data used books and documents related to accounting information systems, such as sales invoices, purchase invoices, financial statements, ledgers, journals and so on. Technique of data analysis was done by descriptive qualitative analysis that describes the object of research in the form of words or statements based on data, analyze and recommend the design of accounting information system sales and inventory on cooperative student of UIN Maliki Malang.

The result of research shows that cooperative student of UIN Maliki Malang need a design of accounting information system primarily related to sales and inventory. It is based on the lack of management and control of inventory and sales that result in a sales turnaround hasn't been recorded and controlled in the improvement of effectiveness and efficiency, as well as in the management of inventories that showed record-keeping fit yet, so that the merchandise inventories less controllable. To fulfill the need and solve the problem then we made a design accounting information system of sales and inventory.
