In today's era globalosasi, most companies engaged in the service have developed very rapidly, one of which is at the hospital. Among existing activities associated with outpatient services and hospitalization is the most important activity, because most hospital revenue derived from it. To carry out its activities effectively and efficiently, a hospital requires a data processing system that supports information, namely the existence of an adequate system of accounting information.

The purpose of this study was to determine the system implemented in the hospital, especially in outpatient services and hospitalization in Lawang Medika General Hospital. This study used qualitative analysis methods of observation, interview, and documentation.

In the present study found several weaknesses in the system that have been used in Lawang Medika General Hospital, this includes duty drawback and that is held within one section or division, lack of adequate documents, as well as the absence of a clear job description for each unit / division. Therefore, the researchers recommend SIA consisting of organizational structure and job description as well as the requirements in the AIS. It was concluded that the accounting information system, is expected to meet the needs of the information on General Hospital Lawang Medika.
