The establishment of Indonesian sport has enhanced in either facilities and supports such as financial from the government. Thought, the achievement of the athletes has various results. Even though they are trained with the same trainer (teacher), the same method, place, and time, the result is different. It indicates that the achievement motivation and type of personality quite influences the result or achievement of the athlete.

This research is aimed to see the relation between the type of personality and the achievement motivation at the athlete of “Pencak Silat”. The type of personality is specified into introvert and extrovert personality. In addition, it is expected to see the different degree of achievement motivation among the introvert and extrovert athletes of “Pencak Silat” in “Pagar Nusa Yayasan Darut Taqwa” Institution Pasuruan.

This research uses Eysenck Personality Inventory (EPI) to know the type of personality and to measure the degree of achievement motivation uses the scale based on McColelland theory. After having accounted through statistic and t-test, it results t=1.188 and p=0,241. It shows that the different motivation on introvert and extrovert athlete is not significance.

Key words: personality, achievement motivation, athlet, pencak silat.
