

ABSTRACT

Istiqomah, Nurul. 2012. The Analysis of factors emotional intelligence for the students of the Faculty of Psychology in The Maulana Malik Ibrahim State Islamic University of Malang, Thesis, Faculty of Psychology, Maulana Malik Ibrahim State Islamic University (UIN) of Malang.

The Advisor : Zainal Habib, M.Hum

Keywords : self-awareness, self-control, self-motivation, empathy and social Intelligence, emotional intelligence factors

Emotional intelligence is one of many ways to the success of people used in their daily life, especially in solving their problem. It was evolved continually within human development and depended on each individual's process of learning. The problem solving will run smoothly, if the process occur in the good-tempered with the open-mindedness and the calm feeling. There are many factors that can determine the level of emotional intelligence, such as: self-awareness, self-control, self-motivation, empathy and social skills.

This research intent to determine how large the contribution of each - including self-awareness, self-control, self-motivation, empathy and social skills- in the students personality of the Faculty of Psychology of the Maulana Malik Ibrahim Malang State Islamic University. The former hypothesis proposed that there are the many factors like self-awareness, self-control, self-motivation, empathy and social skills look as the emotional intelligence factors for the students of Faculty of Psychology in Maulana Malik Ibrahim State Islamic University Malang.

The research design used quantitative approach. The population in this research were the students of faculty of psychology of Maulana Malik Ibrahim State Islamic University Malang. Sampling technique used simple random sampling with a sample among 145 students, and data analysis techniques with CFA (Confirmatory Factor Analysis) used the Amos 18.0.

The research results indicate that self-awareness factor has a factor loading 0.7941 (P-value 0.000 significant ≤ 0.05), self-control factor has a factor loading 0.7801 (P-value 0.000 significant ≤ 0.05), self-motivation factor has a load factor of 0.5056 (P-value 0.000 significant ≤ 0.05), empathy has a load factor of 0.7941 factor (P-value 0.000 significant ≤ 0.05), social skill factor has factor 0.7191 (P-value ≤ 0.05 0.000 significant).
