Keyword: Emotional Intelligence, Quality Relationship with Parents, Juvenile Delinquency

Adolescence stage is a human life rapid change, both in physical and psychological. At this time adolescence is required to adjust the change, as well as cope with demands of the environment to be a person who taking responsibility on their self. Because of many demands, they often not ready, and then instead involved with delinquency. Juvenile Delinquency due to many factors, such as the Quality of Relationship with parents and Emotional Intelligence. This study want to inform the impact of Emotional Intelligence and Quality of Relationship with Parents to Juvenile Delinquency. This research uses quantitative methods.

Emotional intelligence variable using Salovey and Mayer’s theory of emotional Intelligence, Quality of Relationship with Parents variable using attachment theory by Bowlby and Ainsworth, while Juvenile Delinquency variable using Elliot and Ageton delinquency theory, and also support with Willis Sofyan theory about Juvenile Delinquency.

This study use 164 respondents and using purposive random sampling. Retrieval data using two Likert-scale form, Schutte Self report Emotional Intelligence (SSEI) and Parental Attachment Questionnaire (PAQ) and Guttman scale form, Self Report Delinquency (SRD), and also comes with documentation method and observation. This study analyzed with multiple regression analysis technique.

Form the analysis found that there is a strong enough simultaneous effect from Emotional Intelligence and Quality of Relationship with parents to Juvenile Delinquency, but partially the Quality of Relationship with Parent are stronger than Emotional Intelligence in influence Juvenile Delinquency.
