Keywords : Personality Type, Assertive Behavior

---

Assertive behaviour by Galassi & Galassi statement that is someone's ability to communicate the thought, feeling, and desire orally, openly, honestly, and spontaneously without humiliate self dignity or other. The aspects of assertive behaviour is expressed positive feelings, self-affirmation, and express negative feelings. According to rathus, one of the factors which influence assertive behaviour development is personality type, in this research, the personality type divided into 2, they are extrovert and introvert. Therefore, this study aims to (1) know the type of personality student of psychology faculty class 2009 UIN Malang Maulana Malik Ibrahim, (2) determine the level of assertive behavior student of psychology faculty class 2009 UIN Malang Maulana Malik Ibrahim, and (3) determine the relationship of personality types assertive behavior student of psychology faculty class 2009 UIN Malang Maulana Malik Ibrahim.

This research is a quantitative research which uses data collection techniques such as: test instruments, questionnaires, interviews, and observation. The population in this research are 164 psichology faculty of class 2009 UIN Maulana Malik Ibrahim Malang. The sampling technique in this research is random sampling in the percentage of 50%, so that the researcher gets 28 male student and 54 female student. The instrument in this research is EPI (Eysenck Personality Inventory) which is adapted from the personality psychologist Hans Eysenck which consists of 56 statement revealing extrovert and introvert personality type. While, the aspect of assertive behaviour from Galassi & Galassi, uses likert scale of 50 statement and the validity analysis uses product moment and the reliability uses alpha cronbach.

The result of this research can be listed as in extrovert category there are 51 student (62,2 %) and in introvert category there are 31 student (37,8%). While in the assertive behaviour, there are 40 student (48,8%) who have high assertive behaviour, 42 student (51,2%) who have medium assertive behaviour, and 0 student (0%) who have low assertive behaviour. Based on the data collection and analysis the research gets correlation coefficient ( $r_{xy}$ ) 0.314 with  $p = 0.004$  ( $p < 0.05$ ). it means that the correlation of them is significant correlation between personality type and assertive behavior. This proves that the hypothesis in this study received.
