**Keywords: Social interaction in a group of peers and self acceptance adolescent**

This research aims to find out the relationship and level of social interactions in a group of peers towards self-acceptance in Bahrul 'Ulum, al-Ghozali cottage.

Social interaction represent an relation between two people or more, where deportment of individual influence, altering or influencing other individual or on the contrary. Continuity of seen social interaction very simple but in fact interaction represent process which unpredictable because influenced by some elementary factors like dummy, autosuggestion, identify and sympathy, there are in social interaction forms, social interaction form in the form of same Activity ( Cooperation), Emulation ( Competition), Oposition ( Conflict), Concord ( Accomodation) and Assimilation or solidarity ( Asimilation)

Self acceptance have high appreciation to person its opponent, do not behave cynical to ownself, and also have full of acceptance and awareness to whom and what their person acceptance, can esteem others and ownself, and also lick lips with ownself, quality of and talents alone, and also knowledges of limitation will by person acceptance . Aspects influencing to have confidence, pretend it worth, do not pretend abnormal or bizzare, only paying attention their/his self, dare to shoulder responsibility, can get credit or denigration and do not blame person acceptance .

This research was in in Bahrul 'Ulum cottage who 's in town Jombang , namely is al-Ghozali cottage Tambakberas Jombang . A kind of this research is that research quantitative is viewed from the angle of the paradigms of emphasis on research testing theories through the measurement of the variables research with numbers and do an analysis of data by a statistical procedure . A variable research consisting of social interaction and self acceptance . Our data gathering : 1 ) the scale , 2 ) observation , 3 ) interview. The population of this research is teenage Bahrul 'Ulum al-Ghozali cottage, Tambakberas Jombang . A sample of research totaled 40 people .

Based on the research done on the variables shows interactions sosials guiler 90 % of adolescent categorize highly, 10 % categorize being and 0 categorize low . On the variables of self acceptance guiler 80 % adolescent categorize highly , 20 % categorize being and 0 categorize low .

Result of analysis can be said there is positive correlation or there is social interaction variable relation with variable self acceptance because relation between both unidirectional or linear variable, become if Its variable of high him hence Its variable high him and show number equal to  $r = 0,958$  with  $p = 0,000$ . The mentioned also indicate that relation between both have signivficance relation and knows of high correlation.
