ABSTRACT

Awaludin, Iffan. 2015. Thesis. Title: “Analysis and Design of Information Systems Payroll Accounting For Efforts Improving the Effectiveness of Internal Control Hospital KH. Abdurrahman Syamsuri (RS-ARSY) Lamongan district”.

Supervisor : Zuraidah, SE., MSA
Keywords : Payroll Accounting Information System

A company needs accounting information system for the survival of the company. Accounting information systems are all document communication tools, power implementation, and the various reports that are designed to transform financial data into financial information. One system that is important is the payroll system, because it is closely related to the employee, where the employee is a vital component of every company. Hospitals KH. Abdurrahman Syamsuri (RS-ARSY) is one of the companies engaged in service and has a lot of employees. Therefore, the researchers conducted the analysis and design of information systems payroll accounting in an effort to improve the effectiveness of internal control in hospitals KH. Abdurrahman Syamsuri (RS-ARSY) Lamongan.

This study is a qualitative study with a descriptive approach, which describes a situation in a systematic and facts. The data used are primary data and secondary research techniques literature study and field study that includes observation, interview, and documentation.

From the results of the study showed that the RS-ARSY requires good information systems and internal controls were adequate, especially in payroll accounting information system to support and improve effectiveness and efficiency. The draft recommended by the researchers include payroll system general medical services, medical services BPJS payroll system, payroll system the final stage (combined). The thing that still must be considered include: 1. The resulting accounting information has not been written 2. Documents used limited 3. The authorization system is still unclear 4. The existence of double positions.
