

## ABSTRACT

Fauzi, Moh. Agus. 2010. **The design of Blitar District Government Offices.**  
Lecturers Ernaning Setiyowati, M.T. and Agus Subaqin, M.T.

**Keywords:** Government Offices Blitar, Sustainable Architecture

Blitar Government Office is the government building that serves as a building to facilitate all government activities and to support a policy development and service to the community in Blitar. The design of this office due to the presence of Blitar District Government offices that had been located in Blitar City area, considered inadequate to support policy development and community service in various fields. Therefore, based on the results of research and study carefully the various elements involved stakeholders (stakeholders). Capital Blitar its reign the office today, located in the city of Blitar need to be moved to the District Kanigoro residing in the district of Blitar (PP RI No 3, 2010). For that reason, it takes government office which can be a venue for the wheels of government more effective and efficient, and can become a center of social and economic activities that can improve the quality of Blitar region.

In designing Blitar District Government offices are the aspects that come from the theme of Sustainable Architecture and strengthened with the verses in the Qur'an, namely Economic, Ecological, and Social. In its application to the design of Blitar District Government offices are based on data and results of analysis of existing conditions Kanigoro District area located in the district of Blitar (PP RI No.3, 2010). Thus the form of a District Government office buildings, good design of buildings on the condition of the area on the site, building form, building and facilities, so that the office of District Government Blitar become the meeting place of the wheels of government more effective and efficient, and can become a center of social activity and economic which can improve the quality of the region. So that service to the community for the better Blitar.

From the design results obtained, the order of the mass of the building takes the form of a mass order Javanese traditional building, with its head office as regent. While the DPRD office and service offices located around it and some supporting buildings. The arrangement and distribution of building mass is based on functionality and workflow Blitar government to serve the surrounding community. The use of construction materials on the use of materials is more economical, efficient, and have the lowest impact on the building. It is tailored to the theme to be used, namely Sustainable Architecture. With the construction of government offices Blitar using the theme of Sustainable Architecture can be an example of building a more attention to their environment.
