Children Museum Design in Malang is the way to parents introduce to their child how does children's life in the past. They can learn about the children's life in the past and doing activities like a game, music, and movie.

Children Museum design in Malang City using themes folding architecture. Folding architecture is planning to use the museum, and the use of children in a fold. This theme was chosen because of the child is curious and always looking for something new and the latest innovation in the field of building design who demands the emergence of the buildings that can be beneficial in a long time. Folding architecture make this museum has a new face with protrusion modern forms of having the value of beauty and function more complex. The use of this theme is applied to a building form, the boundary, and the use of in the interior.
