

ABSTRAKS

Siswoyo, Doni Agung. 2012. **Relation Between Self-concept attitudes towards gambling**. Thesis. Malang: Faculty of Psychology at the State Islamic University Maulana Malik Ibrahim Malang. Advisor: Fathul Lubabin Nuqul, M.Si
Keywords: self-concept, attitudes towards gambling

Self-concept or self-concept is all about an individual's physical and psychological, and views of the self are unique. The concept is to include: awareness of the views, opinions, and self-assessment of one's self which includes physical, personal self, family self, moral-ethical self and the social self that is obtained through a process of interaction with the environment continuously and differentiable.

Attitudes toward gambling is an act or behavior to accept or reject the gambling behavior based on individual assessments against gambling. The aspects of attitudes towards gambling include: Cognitive Bias, Values pro gambling, irrational beliefs, Pursuing profits.

This research is a qualitative correlation, aims to determine the relationship of self-concept and attitude towards gambling. In the proposed hypothesis there is relationship between self-concept and attitudes towards gambling. In this study, there are two variables, namely self-concept variables as independent variables and variabel attitudes toward gambling as the dependent variable. The sample of the study was a psychology student UIN Maulana Malik Ibrahim unfortunate, as many as 100 students, the sampling techniques used are random purposive. instrument used was a questionnaire self-concept by using a Likert scale of measurement and Gabs (Gambling Attitudes and Beliefs Survey) for variable gambling stance. The validity of measuring instruments obtained from the person and the product moment correlation Cronbach alpha reliability of the results of $\alpha = 0.819$ for self-concept, and $\alpha = 0.924$ for gambling stance. The method of data analysis using product moment correlation person.

The results obtained from this study indicate that the correlation between self-concept and attitude towards gambling is significance value -0.595. This suggests that in the proposed hypothesis received evidenced by the negative relationship between self-concept and attitude towards gambling, which means the higher the level of self-concept the lower attitudes towards gambling and conversely the lower the level of self-concept will be higher levels of attitude against gambling.
