**Keywords : Mining, Iron Sand, Agrarian Law, MUI Fatwa**

Mining is an activity or business venture in the field of natural resource multiplication. Mining activities can not be separated from the agrarian law, because the law is the basic law of agrarian laws which have the processing region of the body of the earth, water, and space and natural resources. Based on the agrarian law of 1945 Article 33 clause (3) at the core of all activities involving earth, water, and space and natural resources should be helpful for the prosperity of the people of Indonesia.

In this study there is a formulation of the problem, that is: 1) What is the impact of iron sand mining in the village Wotgalih district. Yosowilangun Lumajang to the economic growth of society? 2) How is the public response to the iron sand mining in the village Wotgalih Lumajang?. Then analyze its legal according perspectives Agricultural Law and Islamic Law in this study we specialize in MUI Fatwa against iron sand mining activities in the village Wotgalih. This research includes empirical research, with qualitative and descriptive approach to the data analysis methods with qualitative methods.

From the results of the study found that mining activities have a negative impact on the economic life of the community, so community responds by creating an association or organization engaged in advocacy reject mining in their village. According to society iron sand mining will worsen the economy of society now. Develop the community choose their farms of the agricultural land allocated to mining.
