Chariri, F., A. 2014. The influence of self-control against behavior sexuality university student national development (upn) veteran the faculty of social disciplines administration of a business the 2011 surabaya. A thesis. The faculty of psychology state islamic university (uin) Maulana Malik Ibrahim Unfortunate.

Supervisor: Drs. H. Yahya, M.A.

Keywords : Self-control, behavior sexuality, and university students.

Pornography and porno action that thrives in our country fishing teenagers to indulge his desires. Moral movement Do Naked on camera (JBDK) noted an increase in circulation significantly porn videos made by children and adolescents Indonesia. If in 2007 recorded 500 types of porn videos original domestic production, then by 2010 that number surged to 800 kinds. The most alarming fact of the above phenomenon is the fact that about 90 percent of the video, the cast came from among the students. This shows that teens are less able to control the behavior of sexuality. One of the factors that affect the behavior of sexuality is self control. This research aims to know the level of self control and behavior of sexuality on the intensity of University students national development Faculty of social sciences, majoring in business administration Force 2011 Surabaya, as well as to know the influence of the control.

This research using the kind of research quantitative correlation is to find out the influence of a variable against other variables. A subject taken in research is a student university of national development in the faculty of social disciplines administration of a business the 2011 which amounted to 100 students. The technique of the sample on this research is a technique simple random sampling. A method of collecting data in this research using a scale self control and the scale of behavior sexuality. Analysis of data used is simple linear regression analysis.

To research it is found that the majority of students of the university of national development of the social science of the 2011 surabaya have a self-control being namely by the percentage of 62 % (31 student), while 18 % (9 university students) has high levels of self-control and 20 % (10 college students) have a self-control low. To a degree of sexual behavior was found that a majority of university student national development of the social science of the 2011 surabaya be in the prologue and was with the percentage of 62 % (33 students), while 22 % (11 college students) behavior sexuality hight, having a level and 12 % (6 college students) have a sexual behavior low. The result showed that self-control did not influence significantly against sexual behavior, indicated by the value of significance of 0.267 > 0.05. An equation of the regression line $y = a + bx = 79.510 + (-0.403)$, that every the adding of one of the value of self-control it will reduce one n
