

ABSTRACT

Hardysta, Uvynavelia. 2014. *The correlation between parent acceptance that has mentally retarded children with the parent aggressivity towards mentally retarded children in SLB Putra Jaya Malang.*

Advisor : Dr. Iin Tri Rahayu, M.Si

Key Words: *Aggressivity, Parents Acceptance, Mental Retardation*

The rise of aggression against a child that occurred in Indonesia, this is an issue that is very sad. Ironically, this aggressiveness is done by the victim's closest people that's parent. Agresivitas is not only done in normal children but also children with special needs one of them mentally retarded children. Aggressiveness is done by parents to children is one of mental retardation because of parental acceptanceless. However, preliminary observations made in Putra Jaya SLB Malang been several cases of aggressiveness to the child, but many parents who have good eception enough. Formulation of the problem of this research is how the level of aggressiveness of parent to child mental retardation? Bangaimana acceptance rate of parents of children with mental retardation? Is there a correlation between parent acceptance that has mentally retarded children with the parent aggressivity towards mentally retarded children?

The aims of this researc is to know the level of aggressiveness of parents of mental retardated children in SLB Putra Jaya, determine the level of acceptance of parents with mental retardation children in SLB Putra Jaya, and determine whether there is a correlation between parent acceptance that has mentally retarded children with the parent aggressivity towards mentally retarded children in SLB Putra Jaya Malang.

The research design is using correlation qualitative research. Free variable from this research is parent acceptance and aggressivity as dependent variable. Population and also become the sample of this research is parents from the children in SMALB and SMPLB Putra Jaya Malang and totally have 28 respondences. The research instrument is using parent acceptance and parent aggressivity scale. The researcher use try out item analizing because of the sample's limitation, whereas to process the datum, the researcher analyze by using *Product Momment Correlation* from Pearson and helped by SPSS 16,0 Program for Windows.

The result of this research got 4 respondent (15%) that has high parent acceptance, 21 respondent (75%) has medium parent acceptance and 3 (11%) respondent has low parent acceptance. For parent aggressivity, as many as 5 respondent (18%) has high aggressivity, 19 respondent (68%) has medium aggressivity and 4 respondent (14%) has low aggressivity. The correlation test got $r_{xy} = -.091$ dan $p = 0,647$ with 28 sample subject. It shows that there is no correlation between parents acceptance that has mentally retarded children with the parents aggressivity towards mentally retarded children in SLB Putra Jaya Malang because the result value is $p > 0,05$.
