

ABSTRACT

Mahendra, P., J. 2014. The Influence of Emotional Intelligence toward the Altruistic behavior of the students at MTs Ahmad Yani Jabung Malang. Thesis. Faculty of Psychology. The State Islamic University (UIN) Maulana Malik Ibrahim of Malang.

Advisor: Tristiadi Ardi Ardani, M.Si.Psycholog

Keywords: Emotional intelligence, altruistic behavior

Remember that there were many people life in trouble that needed to help. Most of them were Islam religion, so it was necessity for other Muslims to give help. Care about other people can be realized in many various ways that one of them is altruistic behavior (helping behavior). One of the factors that influence altruistic behavior is emotional intelligence. Emotional behavior is not only control you, but also it is more reflect the ability of managing ideas, concepts, work or product. Thus, it could be interest for many people. The purpose of this study was to know the level of emotional intelligence and altruistic behavior of students at MTs Ahmad Yani of Jabung Malang, as well as determine the effect of emotional intelligence on altruistic behavior.

This study was a correlation quantitative of cause and effect that used to know the variable effect to another variable. The subject of this study was students of MTs Ahmad Yani Jabung Malang that were 231 students, and the samples were taken from 60 students using *random sampling* technique. The data analyses were used to know the effects of emotional intelligence on altruistic behavior. So, this study was used simple linier regression analysis with equation $Y = a + bX$.

This study have found that the majority of the students at MTs Ahmad Yani Jabung of Malang were in middle category of emotional behavior with percentage (63,3 %) from the whole 38 students sample, where as the high category was 14 students (23,3 %) from the sample and the low category was 8 students (13,3%). Moreover, the altruistic behavior found that the majority of the students at MTs Ahmad Yani Jabung, Malang were in middle percentage (55%) from the whole 33 students. Then, the high category was (23,3%) from 14 students, and the low category was (21,7%) that that was 13 students from sample. So the results of the regression analysis found the value of *a* (*constant*) was showed 42.680, while B (regression coefficient) was 0.598, and the regression equation $Y = 42.680 + 0.598X$.

The results of this study showed a significant effect of emotional intelligence with F_{hitung} value of 32.208 and $p = 0.000$ at significant level of 5%. Then, the effective contribution to the emotional variable with altruistic behavior, and the value of R Square was 0.357. Meanwhile Adjusted R Square value was 0.346. Emotional intelligence was only contributed 34.6% and 65.4% of other factors. The regression equation $Y = 42.680 + 0.598X$ showed that the score of emotional intelligence was 0. Then, the score of altruistic behavior was 42,680. So, it can be predicted that if there is a change in emotional intelligence scores show 1. Thus, it can influence the change of altruistic behavior in average 0,598 as the result of the coefficient regression B that is obtained the positive.
