---

Every election held by the government always found the term vote. This term does not appear suddenly. At first the concept of non-voters is a form of freedom from dictatorships Ruler, but this time more on the concept of non-voters distrust, disappointment and shape the public against the existing democratic process. The existence of these non-voters would harm Indonesia's democratic system there, so some of the deeply regrets if the existence of non-voters in any election is always increasing. Concerns the existence of non-voters also felt by the chairman of the Indonesian Commission (Husni Kamil Malik) ahead of the 2014 elections. This study discusses the number of abstentions and behavioral tendencies what factors are causing the students of the Faculty of Psychology of UIN Malang.

The design of this study used a descriptive quantitative method . While taking the sample using random sampling techniques. Of the total population of 735 students of the Faculty of Psychology of UIN Malang, a total of 110 or 15 % of the sampled. This study used SPSS 17 for windows.

The results showed that there were 45.5 % of the sample had a tendency to behave non-voters on the party participating in the election in 2014, while the tendency to get a vote in the election celebrations in 2014 amounted to 54.5 %. This fact comparable with the research that has been done by some survey organizations, such as: LPI, etc. By sex, 26.4 % is known as the male sex, and amounted to 19.1 % were female. these data indicate that the tendency to behave more abstentions dominated by student-sex males than females. Based on the category known as half of 7.3 % in the 1st half , amounted to 12.8 % in semester 3, amounted to 4.6 % in the 5th semester , then amounted to 9.1 % in the 7th semester, totaling 7.3 % also at half 9, and the latter amounted to 4.6 % also in semester 11. Based on the known age category amounted to 3.6 % at the age of 18th, amounted to 14.6 % at the age of 19th, then amounted to 5.5 % at the age of 20th, amounted to 8.2 % at the age of 21th, while the 22th age amounted to 4.5 %, then 6.4 % at age 23 years, and the latter at the age of 24 years which amounted to 2.7 %. The facts show that the tendency to behave non-voters on the party participating in the election in 2014 is sufficient lot. Average inclination on aspects of political apathy, political cynicism, and alienation as much as 13.6 %, whereas anomie aspects are the fewest in the liver 4.5 %.
